

RTLDI ATLAS 2026

Right-to-Life Deficit Index for United Nations Member States

Projected Annual GDP Losses from Incomplete Protection
of the Right to Life

2026 Edition

Based on the framework in
Sid J.A. Hubbard
Causality and Attraction: A Continuum of Steady States (Version 3, May 2026)
DOI: 10.5281/zenodo.19468550

Data: V-Dem (2024) + World Bank (latest GDP baseline as of 2026)
Prepared for NGOs, researchers, and policymakers

Executive Description

The Right-to-Life Deficit Index (RTLDI) quantifies the annual economic cost, in lost GDP, that results when states fail to provide equal and effective protection of the right to life. It translates the nine binary indicators of Right-to-Life Protection (RTLP) — drawn from legal, judicial, enforcement, conflict, and socioeconomic realities — into a 0–1 score (R). The core equation, $\Delta G = 0.05 \times (1 - R) \times G_0$, yields the per-capita GDP loss; multiplied by population it produces the aggregate national deficit.

This 2026 Atlas applies the framework to all 193 UN Member States. V-Dem data (latest 2024) supplies the eight governance and civil-liberties components; World Bank data supplies the most recent published GDP per capita as the dynamic baseline (G_0) for 2026. The result is a transparent, reproducible map of where incomplete protection of life imposes the largest measurable drag on human economic activity.

The Atlas is intended as a practical reference for NGOs, national human-rights institutions, development agencies, researchers, and — most importantly — for the people and policymakers inside each of the 193 nations who want to understand the concrete economic costs of incomplete right-to-life protection and to use that knowledge as a diagnostic for reform.

A dedicated Diagnostic Guide (following the Methodology) explains how to read the R scores and 9-component breakdowns as levers: which policy choices and cultural norms move each indicator, how the resulting economic drag becomes visible and attributable, and how awareness of lost potential can shift incentives for the very indicators that are at cause.

Methodology and Data Sources

RTLP Score (R)

R is the simple average of nine binary indicators (0 = no protection, 1 = full protection). Eight indicators are derived from V-Dem v15 (2024 data) using the following thresholds (higher = stronger protection):

1. Legal Protections — $v2cltrnslw \geq 2.0$
2. Independent Judiciary — $\text{average}(v2juhcind, v2juncind) \geq 2.0$
3. Law Enforcement Accountability — $v2clkill \geq 2.0$
4. Protection Against Arbitrary Detention — $v2xcl_acjst \geq 0.5$
5. Freedom from Torture — $v2cltort \geq 2.0$
6. Civilian Protection in Conflict — $v2clkill \geq 2.0$
7. Access to Justice — $v2xcl_acjst \geq 0.5$
8. Freedom of Expression & Whistleblower Protections — $v2x_freexp \geq 0.5$
9. Socioeconomic Conditions — World Bank: undernourishment $\leq 5\%$ AND poverty headcount (\$2.15) $\leq 10\%$.

$$R = (\text{number of 'Yes' indicators}) / 9$$

Economic Projection

ΔG (per-capita loss) = $0.05 \times (1 - R) \times G_0$, where G_0 is the most recent published GDP per capita (World Bank, labeled 2026 baseline in this edition). Total national loss = $\Delta G \times \text{population}$.

Data Vintage Note for 2026 Edition

V-Dem components reflect the latest available year in the source file (2024). GDP per capita (G_0) uses the freshest published values available at the time of atlas production. This follows the principle that RTLP governance scores are relatively stable year-to-year while GDP is the more dynamic variable in the equation.

Diagnostic Guide: Using RTLDI as a Reform Tool

The RTLDI ATLAS is not only a ranking. It is a diagnostic instrument that converts the presence or absence of nine specific protections into a recurring, measurable annual economic cost.

This section explains how people and policymakers inside these nations can use the R scores, the 9-component breakdowns, the per-capita ΔG figures, and the total national deficits as concrete levers for change.

The Core Translation

The equation is $\Delta G = 0.05 \times (1 - R) \times G_0$.

R is the average of the nine binary RTLP indicators. G_0 is GDP per capita. ΔG is the estimated annual loss per person caused by incomplete protection of life. Total national deficit $\approx \Delta G \times$ population.

A country with $R = 0.44$ and $G_0 = \$10,000$ loses roughly \$280 per person every year — money that never materializes in budgets, never circulates, never funds the next generation. When this number is large, persistent, and broken down into nine specific, fixable components, it stops being an abstract 'governance problem' and becomes a structural drag with a visible price tag.

The Nine Levers — What Actually Moves R

R changes only when one or more indicators flip from 0 to 1. Each flip is worth ~ 0.11 in R and therefore $\sim 0.55\%$ of G_0 in reduced annual per-capita loss for the whole population.

1. Legal Protections (transparent, predictable enforcement that actually constrains power). Moved by consistent application of ordinary law against state agents, not by paper constitutions.
2. Independent Judiciary. Moved by insulated appointments, secure tenure, and a professional culture that rewards fidelity to law over political advancement.
3. Law Enforcement Accountability. Moved by independent investigations, data transparency, civilian oversight with power, and political leadership that refuses to incite or excuse unlawful killings.
4. Protection Against Arbitrary Detention. Moved by real habeas, time limits on pre-trial detention, legal aid, and courts willing to order release of politically inconvenient people.
5. Freedom from Torture. Moved by criminalization with no loopholes, exclusion of tainted evidence, monitoring of detention, and training that treats torture as career suicide.
6. Civilian Protection in Conflict/High-Violence Areas. Moved by rules of engagement that enforce distinction and proportionality, effective command responsibility, and post-incident accountability even when victims are unpopular.
7. Access to Justice. Moved by affordable legal aid for serious claims, protection for lawyers taking hard cases, timely proceedings, and enforcement of judgments against the state itself.
8. Freedom of Expression & Whistleblower Protection. Moved by decriminalization of criticism, source protection, real whistleblower remedies, and a political culture that treats exposure of state violence as legitimate rather than disloyal.
9. Socioeconomic Conditions (basic nutrition and health). Moved by fiscal priorities, social insurance design, land and labor policy, and the political decision to treat minimal life-sustaining conditions as a public responsibility rather than a private consumption choice.

These nine are causally nested. Weak judicial independence undermines accountability for killings and torture. Weak expression rights make it harder for anyone to document the other failures. The source document frames them as structural parameters inside 'nested causal enclosures' that enable or constrain higher-order economic and social steady states.

How Awareness of Lost Economic Potential Changes the Indicators

When the only available language is 'human rights are good,' the political costs of reform (upsetting security services, elites, or nationalist stories) usually prevail. The benefits remain moral and diffuse.

When the same reform can also be described as 'this specific change would return roughly \$X billion per year to our economy, every year, and here are the three statutes and one appointment that would flip the indicator,' the political economy shifts.

Finance ministries acquire a stake. Business groups can be recruited. Opposition parties can campaign on stopping the waste. Media has a concrete number instead of another abstract abuse story. International partners can target assistance to the exact weak indicators rather than generic 'rule of law' programs.

The 3-year trend plots on each nation page exist for this purpose: they show whether the drag is stable, growing with the economy even while R is flat, or beginning to shrink as specific protections improve.

Practical Use

For national policymakers: Open your profile. Note your R and the specific 'No' indicators. Compare the total annual deficit to your health or education budget. Ask the civil service to cost the political and budgetary effort required to move one or two indicators in the next V-Dem cycle and compare it to the recurring benefit.

For civil society and media: Use the numbers in domestic advocacy, not only international forums. 'We lose \$2.3 billion every year because we have not made law enforcement accountable for killings. That is more than the entire health budget. Here is the one change that begins to close the gap.'

For citizens: The data is public. When leaders promise 'development,' ask which of the nine protections they will strengthen and how we will know in four years whether R has moved.

For international actors: Stop separating 'human rights' and 'economic growth' pillars. Target a share of governance and security assistance explicitly to the indicators that are currently 'No' for that country and measure success partly by movement on those variables in the next data release.

Limitations and Responsible Use

R in this edition uses 2024 V-Dem data paired with the freshest published GDP figures. Real-time events after the data cutoff are not yet visible. Binarization thresholds are modeling choices; always examine the raw values in the nation breakdowns. The 0.05 coefficient is a central estimate; the identity of the weak indicators is more robust than the precise dollar figure. Causality runs both ways: low R produces drag, and severe economic stress can degrade state capacity and rights performance.

The deeper claim, taken from the source document, is that these nine protections are not a moral add-on but structural parameters that make certain kinds of economic and social steady states easier or harder to reach. Making the cost of a weak parameter legible in annual GDP terms does not reduce rights to economics. It makes the causal structure visible to the actors who can actually adjust the parameters.

Cartographic Approach and the Nested Map

The source document (Causality and Attraction, Hubbard 2026V3) critiques the insufficiency of flat maps and praises the low-distortion Fuller-inspired butterfly map. It treats representation as a structural act that must honor nested causal enclosures.

Hybrid model: All generated choropleths (global, 22 regional, 193 nation zooms) use Mollweide (equal-area) via Plotly. This ensures accurate area representation, full reproducibility with standard tools (no heavy GIS required), and accessibility for NGOs using their own data. Mollweide is the practical default.

Canonical Global Choropleth — Enclosure Strength (R)

Canonical whole-earth view: the image serves as the primary visual anchor, embodying the source's call for structurally faithful, low-distortion mapping of the global human enclosure.

Mollweide equal-area projection. Primary anchor for accuracy and nested wholeness (source Ch. 2). Regional and nation views throughout the atlas use the identical projection and Viridis R scale.

Global Lost GDP by RTLP Indicator

#	Indicator (RTLP)	Annual Lost GDP	% total
5	Freedom from Torture and Inhumane Tre	\$511.3 bn	17.7%
Measures in place to prevent torture			
2	Independent Judiciary	\$498.5 bn	17.3%
Independent judiciary capable of upholding right-to-life laws			
1	Existence of Legal Protections	\$491.0 bn	17.0%
Provisions explicitly protecting the right to life			
9	Socioeconomic Conditions	\$311.9 bn	10.8%
Access to healthcare, food, and shelter adequate to sustain life			
3	Law Enforcement Accountability	\$253.7 bn	8.8%
Law enforcement agencies accountable for unlawful killings			
6	Civilian Protection in Conflict Zones	\$253.7 bn	8.8%
Mechanisms protecting civilians in conflict areas			
4	Protection Against Arbitrary Detention	\$190.0 bn	6.6%
Arbitrary detention prohibited with legal recourse			
7	Access to Justice	\$190.0 bn	6.6%
Fair access to remedies for right-to-life violations			
8	Freedom of Expression and Whistleblowe	\$188.0 bn	6.5%
Expression and whistleblower rights upheld			

These figures paint a picture of a world where the greatest economic drags come from failures to prevent torture and inhumane treatment and to ensure independent judiciaries and basic legal protections—together accounting for well over a trillion dollars in annual lost output. Strengths appear in freedom of expression/whistleblowing and access to justice/arbitrary detention, where losses are comparatively lower, suggesting pockets of better civil liberties and recourse. Socioeconomic shortfalls remain a persistent burden. The data underscore how weaknesses in core governance and physical integrity protections—key to the nested causal enclosures in the source framework—severely constrain global prosperity and steady-state resilience.

The total global annual lost GDP for the planet is estimated at \$2.89 trillion.

Data in outputs/atlas/ supports re-projection in external tools for AuthaGraph/Dymaxion if desired. See source Ch. 2 and Epilogue on maps and nested causality (DOI 10.5281/zenodo.19468550).

UN Regional Summaries

The 193 UN Member States are grouped into 22 geographic regions. Below are one-page overviews for each region, aggregating the RTLDI metrics. For each region we show a choropleth of enclosure strength (R) for its member countries (zoomed to the region using the same Viridis scale as the global map), key aggregates (population-weighted average R, total annual lost GDP), and a breakdown of the 9 RTLP indicators. The breakdown reports the percentage of countries in the region scoring 'Yes' on each indicator and the estimated portion of the region's total lost GDP attributable to shortfalls on that indicator (the sum, across countries lacking the protection, of $0.05/9 \times G_o \times \text{population}$).

Regional statistics are derived directly from the per-country 2026 atlas values. High-impact regions (by total lost GDP) are shown first.

Eastern Asia Region

Countries: 5 | Population: 1,614.7 million | Pop-weighted Avg R: 0.063 | Total Annual Lost GDP: \$1,067.36 billion

The Eastern Asia region has a population-weighted average RTLP score of 0.06. This cumulative measure indicates that, across its 5 member countries, roughly 6% of the nine core protections are in place on average, resulting in an estimated \$1,067.36 billion in annual lost GDP. The region demonstrates particular strength in Protection Against Arbitrary Detention, Access to Justice, where a substantial share of countries satisfy the binarization thresholds for those indicators. The highest-scoring nation is Japan (R=0.67), while the lowest is China (R=0.00).

Addressing the weaker indicators—especially Freedom from Torture and Inhumane Treatment, Socioeconomic Conditions—offers significant growth potential. Improving these failing protections across the region could recover an estimated \$411.18 billion in annual GDP (a meaningful fraction of the current deficit). Such reforms would enhance per-capita output, attract investment, and reinforce the nested causal enclosures that underpin long-term economic and social steady states, consistent with the source framework.

Regional Choropleth — Enclosure Strength (R)

Eastern Asia Region — Enclosure Strength (R)

Zoomed to countries in this UN region (Mollweide projection, same Viridis R scale as the global choropleth). ★ would mark a specific nation in per-country views.

RTLP Indicator Breakdown for the Region

- Existence of Legal Protections: 20% Yes (1/5) | avg raw 0.30**
Attributable lost GDP: \$114.68 billion (11% of region total). Provisions explicitly protecting the right to life
- Independent Judiciary: 0% Yes (0/5) | avg raw -0.50**
Attributable lost GDP: \$137.06 billion (13% of region total). Independent judiciary capable of upholding right-to-life laws
- Law Enforcement Accountability: 40% Yes (2/5) | avg raw 1.07**
Attributable lost GDP: \$114.55 billion (11% of region total). Law enforcement agencies accountable for unlawful killings
- Protection Against Arbitrary Detention: 60% Yes (3/5) | avg raw 0.60**
Attributable lost GDP: \$104.13 billion (10% of region total). Arbitrary detention prohibited with legal recourse
- Freedom from Torture and Inhumane Treatment: 0% Yes (0/5) | avg raw -0.13**
Attributable lost GDP: \$137.06 billion (13% of region total). Measures in place to prevent torture
- Civilian Protection in Conflict Zones: 40% Yes (2/5) | avg raw 1.07**
Attributable lost GDP: \$114.55 billion (11% of region total). Mechanisms protecting civilians in conflict areas
- Access to Justice: 60% Yes (3/5) | avg raw 0.60**
Attributable lost GDP: \$104.13 billion (10% of region total). Fair access to remedies for right-to-life violations
- Freedom of Expression and Whistleblower Protections: 60% Yes (3/5) | avg raw 0.48**
Attributable lost GDP: \$104.13 billion (10% of region total). Expression and whistleblower rights upheld
- Socioeconomic Conditions: 0% Yes (0/5) | avg raw 0.00**
Attributable lost GDP: \$137.06 billion (13% of region total). Access to healthcare, food, and shelter adequate to sustain life

Critically, every single nation in the Eastern Asia region is currently failing indicator 2. Independent Judiciary. Getting this one indicator right across the whole region would recover an estimated \$137.06 billion in annual GDP.

Note: Weighted R is population-weighted mean of member countries' R. Attributable lost for an indicator = sum over countries with 'No' on that indicator of $(0.05/9 \times G_0 \times \text{pop})$. See individual nation profiles for country-level detail and 3-year trends. Full global choropleth appears in the front matter / outputs/figures/.

Northern America Region

Countries: 2 | Population: 381.4 million | Pop-weighted Avg R: 0.679 | Total Annual Lost GDP: \$504.11 billion

The Northern America region has a population-weighted average RTLP score of 0.68. This cumulative measure indicates that, across its 2 member countries, roughly 68% of the nine core protections are in place on average, resulting in an estimated \$504.11 billion in annual lost GDP. The region demonstrates particular strength in Law Enforcement Accountability, Protection Against Arbitrary Detention, where a substantial share of countries satisfy the binarization thresholds for those indicators.

Addressing the weaker indicators—especially Socioeconomic Conditions, Existence of Legal Protections—offers significant growth potential. Improving these failing protections across the region could recover an estimated \$344.38 billion in annual GDP (a meaningful fraction of the current deficit). Such reforms would enhance per-capita output, attract investment, and reinforce the nested causal enclosures that underpin long-term economic and social steady states, consistent with the source framework.

Southern Asia Region

Countries: 9 | Population: 2,062.9 million | Pop-weighted Avg R: 0.009 | Total Annual Lost GDP: \$266.29 billion

The Southern Asia region has a population-weighted average RTLP score of 0.01. This cumulative measure indicates that, across its 9 member countries, roughly 1% of the nine core protections are in place on average, resulting in an estimated \$266.29 billion in annual lost GDP. The region demonstrates particular strength in Protection Against Arbitrary Detention, Access to Justice, where a substantial share of countries satisfy the binarization thresholds for those indicators. The highest-scoring nation is Sri Lanka (R=0.33), while the lowest is India (R=0.00).

Addressing the weaker indicators—especially Civilian Protection in Conflict Zones, Socioeconomic Conditions—offers significant growth potential. Improving these failing protections across the region could recover an estimated \$89.61 billion in annual GDP (a meaningful fraction of the current deficit). Such reforms would enhance per-capita output, attract investment, and reinforce the nested causal enclosures that underpin long-term economic and social steady states, consistent with the source framework.

South-eastern Asia Region

Countries: 11 | Population: 695.4 million | Pop-weighted Avg R: 0.257 | Total Annual Lost GDP: \$132.74 billion

The South-eastern Asia region has a population-weighted average RTLP score of 0.26. This cumulative measure indicates that, across its 11 member countries, roughly 26% of the nine core protections are in place on average, resulting in an estimated \$132.74 billion in annual lost GDP. The region demonstrates particular strength in Protection Against Arbitrary Detention, Access to Justice, where a substantial share of countries satisfy the binarization thresholds for those indicators. The highest-scoring nation is Singapore (R=0.67), while the lowest is Vietnam (R=0.00).

Addressing the weaker indicators—especially Existence of Legal Protections, Independent Judiciary—offers significant growth potential. Improving these failing protections across the region could recover an estimated \$57.88 billion in annual GDP (a meaningful fraction of the current deficit). Such reforms would enhance per-capita output, attract investment, and reinforce the nested causal enclosures that underpin long-term economic and social steady states, consistent with the source framework.

RTLP Indicator Breakdown for the Region

1. Existence of Legal Protections: 9% Yes (1/11) | avg raw -0.28

Attributable lost GDP: \$19.10 billion (14% of region total). Provisions explicitly protecting the right to life

2. Independent Judiciary: 0% Yes (0/11) | avg raw -0.10

Attributable lost GDP: \$22.14 billion (17% of region total). Independent judiciary capable of upholding right-to-life laws

3. Law Enforcement Accountability: 27% Yes (3/11) | avg raw 0.44

Attributable lost GDP: \$16.74 billion (13% of region total). Law enforcement agencies accountable for unlawful killings

4. Protection Against Arbitrary Detention: 45% Yes (5/11) | avg raw 0.51

Attributable lost GDP: \$6.42 billion (5% of region total). Arbitrary detention prohibited with legal recourse

5. Freedom from Torture and Inhumane Treatment: 18% Yes (2/11) | avg raw 0.06

Attributable lost GDP: \$19.09 billion (14% of region total). Measures in place to prevent torture

6. Civilian Protection in Conflict Zones: 27% Yes (3/11) | avg raw 0.44

Attributable lost GDP: \$16.74 billion (13% of region total). Mechanisms protecting civilians in conflict areas

7. Access to Justice: 45% Yes (5/11) | avg raw 0.51

Attributable lost GDP: \$6.42 billion (5% of region total). Fair access to remedies for right-to-life violations

8. Freedom of Expression and Whistleblower Protections: 36% Yes (4/11) | avg raw 0.39

Attributable lost GDP: \$9.46 billion (7% of region total). Expression and whistleblower rights upheld

9. Socioeconomic Conditions: 18% Yes (2/11) | avg raw 0.00

Attributable lost GDP: \$16.65 billion (13% of region total). Access to healthcare, food, and shelter adequate to sustain life

Critically, every single nation in the South-eastern Asia region is currently failing indicator 2. Independent Judiciary. Getting this one indicator right across the whole region would recover an estimated \$22.14 billion in annual GDP.

Note: Weighted R is population-weighted mean of member countries' R. Attributable lost for an indicator = sum over countries with 'No' on that indicator of $(0.05/9 \times G_0 \times \text{pop})$. See individual nation profiles for country-level detail and 3-year trends. Full global choropleth appears in the front matter / outputs/figures/.

South America Region

Countries: 12 | Population: 435.3 million | Pop-weighted Avg R: 0.421 | Total Annual Lost GDP: \$114.44 billion

The South America region has a population-weighted average RTLP score of 0.42. This cumulative measure indicates that, across its 12 member countries, roughly 42% of the nine core protections are in place on average, resulting in an estimated \$114.44 billion in annual lost GDP. The region demonstrates particular strength in Freedom of Expression and Whistleblower Protections, Protection Against Arbitrary Detention, where a substantial share of countries satisfy the binarization thresholds for those indicators. The highest-scoring nation is Chile (R=1.00), while the lowest is Venezuela (R=0.00).

Addressing the weaker indicators—especially Independent Judiciary, Freedom from Torture and Inhumane Treatment—offers significant growth potential. Improving these failing protections across the region could recover an estimated \$65.09 billion in annual GDP (a meaningful fraction of the current deficit). Such reforms would enhance per-capita output, attract investment, and reinforce the nested causal enclosures that underpin long-term economic and social steady states, consistent with the source framework.

RTLP Indicator Breakdown for the Region

1. Existence of Legal Protections: 0% Yes (0/6) | avg raw -1.00

Attributable lost GDP: \$5.37 billion (15% of region total). Provisions explicitly protecting the right to life

2. Independent Judiciary: 17% Yes (1/6) | avg raw 0.12

Attributable lost GDP: \$4.49 billion (12% of region total). Independent judiciary capable of upholding right-to-life laws

3. Law Enforcement Accountability: 17% Yes (1/6) | avg raw 0.45

Attributable lost GDP: \$5.08 billion (14% of region total). Law enforcement agencies accountable for unlawful killings

4. Protection Against Arbitrary Detention: 67% Yes (4/6) | avg raw 0.56

Attributable lost GDP: \$0.55 billion (2% of region total). Arbitrary detention prohibited with legal recourse

5. Freedom from Torture and Inhumane Treatment: 0% Yes (0/6) | avg raw -0.61

Attributable lost GDP: \$5.37 billion (15% of region total). Measures in place to prevent torture

6. Civilian Protection in Conflict Zones: 17% Yes (1/6) | avg raw 0.45

Attributable lost GDP: \$5.08 billion (14% of region total). Mechanisms protecting civilians in conflict areas

7. Access to Justice: 67% Yes (4/6) | avg raw 0.56

Attributable lost GDP: \$0.55 billion (2% of region total). Fair access to remedies for right-to-life violations

8. Freedom of Expression and Whistleblower Protections: 33% Yes (2/6) | avg raw 0.41

Attributable lost GDP: \$4.20 billion (12% of region total). Expression and whistleblower rights upheld

9. Socioeconomic Conditions: 0% Yes (0/6) | avg raw 0.00

Attributable lost GDP: \$5.37 billion (15% of region total). Access to healthcare, food, and shelter adequate to sustain life

Critically, every single nation in the Northern Africa region is currently failing indicator 1. Existence of Legal Protections. Getting this one indicator right across the whole region would recover an estimated \$5.37 billion in annual GDP.

Note: Weighted R is population-weighted mean of member countries' R. Attributable lost for an indicator = sum over countries with 'No' on that indicator of $(0.05/9 \times G_0 \times \text{pop})$. See individual nation profiles for country-level detail and 3-year trends. Full global choropleth appears in the front matter / outputs/figures/.

Central Asia Region

Countries: 5 | Population: 82.3 million | Pop-weighted Avg R: 0.078 | Total Annual Lost GDP: \$23.55 billion

The Central Asia region has a population-weighted average RTLP score of 0.08. This cumulative measure indicates that, across its 5 member countries, roughly 8% of the nine core protections are in place on average, resulting in an estimated \$23.55 billion in annual lost GDP. The region demonstrates particular strength in several key areas, where a substantial share of countries satisfy the binarization thresholds for those indicators. The highest-scoring nation is Kyrgyzstan (R=0.33), while the lowest is Kazakhstan (R=0.00).

Addressing the weaker indicators—especially Freedom from Torture and Inhumane Treatment, Civilian Protection in Conflict Zones—offers significant growth potential. Improving these failing protections across the region could recover an estimated \$8.16 billion in annual GDP (a meaningful fraction of the current deficit). Such reforms would enhance per-capita output, attract investment, and reinforce the nested causal enclosures that underpin long-term economic and social steady states, consistent with the source framework.

Attributable lost GDP: \$1.65 billion (14% of region total). Law enforcement agencies accountable for unlawful killings

4. Protection Against Arbitrary Detention: 33% Yes (3/9) | avg raw 0.43

Attributable lost GDP: \$0.97 billion (8% of region total). Arbitrary detention prohibited with legal recourse

5. Freedom from Torture and Inhumane Treatment: 11% Yes (1/9) | avg raw -0.31

Attributable lost GDP: \$1.65 billion (14% of region total). Measures in place to prevent torture

6. Civilian Protection in Conflict Zones: 0% Yes (0/9) | avg raw -0.01

Attributable lost GDP: \$1.65 billion (14% of region total). Mechanisms protecting civilians in conflict areas

7. Access to Justice: 33% Yes (3/9) | avg raw 0.43

Attributable lost GDP: \$0.97 billion (8% of region total). Fair access to remedies for right-to-life violations

8. Freedom of Expression and Whistleblower Protections: 67% Yes (6/9) | avg raw 0.52

Attributable lost GDP: \$0.27 billion (2% of region total). Expression and whistleblower rights upheld

9. Socioeconomic Conditions: 0% Yes (0/9) | avg raw 0.00

Attributable lost GDP: \$1.65 billion (14% of region total). Access to healthcare, food, and shelter adequate to sustain life

Critically, every single nation in the Middle Africa region is currently failing indicator 2. Independent Judiciary. Getting this one indicator right across the whole region would recover an estimated \$1.65 billion in annual GDP.

Note: Weighted R is population-weighted mean of member countries' R. Attributable lost for an indicator = sum over countries with 'No' on that indicator of $(0.05/9 \times G_0 \times \text{pop})$. See individual nation profiles for country-level detail and 3-year trends. Full global choropleth appears in the front matter / outputs/figures/.

Caribbean Region

Countries: 13 | Population: 39.7 million | Pop-weighted Avg R: 0.202 | Total Annual Lost GDP: \$7.49 billion

The Caribbean region has a population-weighted average RTLP score of 0.20. This cumulative measure indicates that, across its 13 member countries, roughly 20% of the nine core protections are in place on average, resulting in an estimated \$7.49 billion in annual lost GDP. The region demonstrates particular strength in several key areas, where a substantial share of countries satisfy the binarization thresholds for those indicators. The highest-scoring nation is Barbados (R=0.78), while the lowest is Bahamas (R=0.00).

Addressing the weaker indicators—especially Socioeconomic Conditions, Existence of Legal Protections—offers significant growth potential. Improving these failing protections across the region could recover an estimated \$3.09 billion in annual GDP (a meaningful fraction of the current deficit). Such reforms would enhance per-capita output, attract investment, and reinforce the nested causal enclosures that underpin long-term economic and social steady states, consistent with the source framework.

Attributable lost GDP: \$0.97 billion (13% of region total). Fair access to remedies for right-to-life violations

8. Freedom of Expression and Whistleblower Protections: 38% Yes (5/13) | avg raw 0.75

Attributable lost GDP: \$0.14 billion (2% of region total). Expression and whistleblower rights upheld

9. Socioeconomic Conditions: 8% Yes (1/13) | avg raw 0.00

Attributable lost GDP: \$0.59 billion (8% of region total). Access to healthcare, food, and shelter adequate to sustain life

Critically, every single nation in the Caribbean region is currently failing indicator 1. Existence of Legal Protections. Getting this one indicator right across the whole region would recover an estimated \$1.28 billion in annual GDP.

Note: Weighted R is population-weighted mean of member countries' R. Attributable lost for an indicator = sum over countries with 'No' on that indicator of $(0.05/9 \times G_0 \times \text{pop})$. See individual nation profiles for country-level detail and 3-year trends. Full global choropleth appears in the front matter / outputs/figures/.

Melanesia Region

Countries: 4 | Population: 12.7 million | Pop-weighted Avg R: 0.355 | Total Annual Lost GDP: \$1.27 billion

The Melanesia region has a population-weighted average RTLP score of 0.36. This cumulative measure indicates that, across its 4 member countries, roughly 36% of the nine core protections are in place on average, resulting in an estimated \$1.27 billion in annual lost GDP. The region demonstrates particular strength in Protection Against Arbitrary Detention, Access to Justice, where a substantial share of countries satisfy the binarization thresholds for those indicators. The highest-scoring nation is Fiji (R=0.56), while the lowest is Papua New Guinea (R=0.33).

Addressing the weaker indicators—especially Freedom from Torture and Inhumane Treatment, Socioeconomic Conditions—offers significant growth potential. Improving these failing protections across the region could recover an estimated \$0.67 billion in annual GDP (a meaningful fraction of the current deficit). Such reforms would enhance per-capita output, attract investment, and reinforce the nested causal enclosures that underpin long-term economic and social steady states, consistent with the source framework.

Regional Choropleth — Enclosure Strength (R)

Micronesia Region

Countries: 4 | Population: 0.3 million | Pop-weighted Avg R: 0.049 | Total Annual Lost GDP: \$0.07 billion

The Micronesia region has a population-weighted average RTLP score of 0.05. This cumulative measure indicates that, across its 4 member countries, roughly 5% of the nine core protections are in place on average, resulting in an estimated \$0.07 billion in annual lost GDP. The region demonstrates particular strength in several key areas, where a substantial share of countries satisfy the binarization thresholds for those indicators. The highest-scoring nation is Kiribati (R=0.11), while the lowest is Micronesia, Fed. Sts. (R=0.00).

Addressing the weaker indicators—especially Access to Justice, Freedom of Expression and Whistleblower Protections—offers significant growth potential. Improving these failing protections across the region could recover an estimated \$0.02 billion in annual GDP (a meaningful fraction of the current deficit). Such reforms would enhance per-capita output, attract investment, and reinforce the nested causal enclosures that underpin long-term economic and social steady states, consistent with the source framework.
